

nLogic technology plays key role in US Army's next-generation radar competition

nLogic helps Raytheon field technology that overmatches threat

HUNTSVILLE, Ala. (5 August 2019) — The U.S. Army will soon be evaluating a new missile defense radar, featuring technology from nLogic. The radar, made by Raytheon Company (NYSE: RTN) is being evaluated by the U.S. Army as part of a competition for the Lower Tier Air and Missile Defense Sensor (LTAMDS). Raytheon submitted its proposal on July 16.

“nLogic is helping Raytheon deliver a brand new radar to the warfighter which will be fielded as quickly as possible,” said Tim Thornton, CEO of nLogic. “Our expertise is playing a critical role in providing the warfighter a mature, cutting edge and incredibly capable radar.”

nLogic is conducting game-changing sustainment and logistics for Raytheon’s LTAMDS solution.

Raytheon’s LTAMDS offering was demonstrated in an event known as a sense-off, which put Raytheon’s LTAMDS solution through a series of challenging scenarios. Raytheon completed its sense-off participation on May 15. During the sense-off, Raytheon’s LTAMDS solution:

- Demonstrated key mission capabilities to the warfighter,
 - Validated the maturity of the Raytheon LTAMDS design,
 - Successfully acquired and tracked a variety of threat-representative targets, &
 - Demonstrated advanced capabilities showcasing Raytheon’s solution.
-
